

# ABC at Home

ABC at Home delivers **applied behavior analysis (ABA) therapy** in the home environment for children diagnosed with autism spectrum disorder (ASD). Backed by decades of research, ABA therapy is effective in addressing autism-related symptoms and helping children develop essential life skills.

With 1:1 support from a Registered Behavior Technician® (RBT®) and supervision from a Board Certified Behavior Analyst® (BCBA®), ABC at Home allows children to develop self-care, communication, and social skills where they use them most: at home and in everyday life. Families receive ongoing coaching to support their child's progress outside of therapy sessions.

## What to expect

Before starting ABC at Home, a BCBA conducts a skills-based assessment to identify the child's needs. Families work closely with their child's BCBA to determine specific target behaviors and therapy goals. A dedicated therapy team then implements sessions in the home, following a schedule coordinated by the child's family and BCBA.

## ABC at Home can help children develop and improve the following:

- **Communication skills** (*Verbal language, nonverbal communication*)
- **School readiness skills** (*Imitation, matching, categorizing*)
- **Reduction of certain behaviors** (*Aggression, self-injury, property destruction*)
- **Social skills** (*Initiating conversation, responding to questions, engaging in interactive play*)

## Eligibility criteria

- **Ages:** 18 months to 13 years
- **Weekly therapy hours:** 20–40 hours
- **Setting:** In-home
- **Location:** Must be within 30 minutes of an ABC center
- **Environment of Care Agreement required**

*86% of families at Action Behavior Centers see significant improvements in their child's challenging behaviors within the first year of ABA therapy. These children continue to make progress even as their therapy hours decrease.*

\*Children featured are not affiliated with ABC services

 **ABC at Home available in Austin, San Antonio, Dallas, & Houston**
